---

### SKILLS

Scrum | Agile | Jira | Timeline Estimation | HTML | CSS | ReactJS | Typescript | NodeJS | AWS | Github Actions | Terragrunt

---

### WORK EXPERIENCE

#### BMW LEASING THAILAND

Feb 2024 - Present

##### BUSINESS ANALYST | PROJECT MANAGER | DEVOPS ENGINEER

Be an IT representative to align the business requirement with the development team on a global solution.  
Improve the workflow and patching security and lead vendor on a local application.

- Contributed to the IFRS9 resolution deployment, reducing delinquency by nearly 60%, using my technical expertise to review the solution, accelerating implementation by a month.
- Involved in Credit scoring implementation, which followed Bank of Thailand (BOT) standards. Translated complex business requirements into clear technical instructions for developers, enabling them to complete development within a week.
- Planned and estimated a project's timeline for the crucial EKYC project in the new business department, ensuring timely delivery by guiding the vendor with technical expertise, and optimized cloud services, reducing costs by approximately 30% per month.
- Implemented an automated deployment process to cut daily deployment time by 80%.
- Streamlined operations by documenting processes and training the maintenance vendor to work independently, saving the team's members at least 30 minutes per week

#### DELTA DYNAMIC THAILAND

Mar 2023 - Jan 2024

##### PROJECT MANAGER | FULLSTACK DEVELOPER

Working with a British start-up tech transformation company, which has a client around the globe. Mainly, apply technology tools, such as Salesforce, Sendbird and more to suit customer needs.

- Served as the primary liaison between the client and our development team, managing negotiations and breaking down customer requests into smaller tasks to fit into a 2-week sprint instead of a monthly or quarterly release. Also utilized transparent project management tools like Jira to maintain clear alignment with the customer.
- Coordinated between the client and subvendor to optimize resource management, performing task breakdowns to effectively manage costs, and reducing outsourced man-day expenses by at least 20%
- Documented key processes, architecture, and infrastructure of our system in Confluence to create a centralized knowledge base, streamlining onboarding and reducing ramp-up time for new team members to start working in less than a week.

#### FORVIZ

Dec 2020 - Feb 2023

##### PROJECT MANAGER | FULLSTACK DEVELOPER

In late 2020, I worked across all aspects of software development, from gathering customer requirements as a BA to project planning, then coding and including selecting the technical stack of the upcoming project

- Created a website mockup and converted it into a wireframe, streamlining customer approvals for a contract worth over half a million Baht while reducing designer workload by approximately 50% compared to regular projects.
- Facilitated customer meetings by providing clear options, guiding discussions to ensure alignment, and documenting meeting minutes to help conclude meetings within the set timeframe.
- Stepped in during a client event after an administrator's accident, I took over critical tasks to ensure smooth operations, prevent disruptions, and save my coworkers valuable time.
- Implemented AWS EventBridge and a serverless architecture to automate report generation for customers, eliminating the need for manually assigning tasks to developers daily.
- Developed a customer website with a React and Material UI frontend, leveraging TypeScript and a serverless backend for scalability and efficiency

#### MORELOOP

Aug 2019 - Nov 2020

##### ASSISTANCE MANAGER

Environment is what I focus on. Moreloop is an eco-friendly start-up with the main idea of circularising the surplus fabric left all over the garment factory in Thailand. This job opportunity has provided me with business logic and management skills.

- Designed a supply chain-style workflow to automate and streamline the process of pushing over 200 SKUs to the startup's website each month, ensuring efficiency and consistency.
- Developed an inventory system to help the company organize and categorize products efficiently, reducing shipping time by at least one day
