TODSAPORN WATTANAIABPAN

TECHNICAL PROJECT MANAGER | BUSINESS ANALYST

wat.todsaporn@gmail.com Mobile: +(66)63-824-7280

SKILLS

Scrum | Agile | Waterfall | Jira | Notion | Project Planning | Task Estimation | Vendor Management | Github Actions | Terragrunt | Confluence | ReactJS | Docker | Kubernetes | Serverless | Typescript | SQL | AWS | Azure | MongoDB | PostgreSQL | Miro

SUMMARY

- 7+ years in IT delivery, bridging business requirements and technical teams to deliver complex financial, insurance, AI, and regulatory-driven projects.
- Skilled in managing end-to-end project lifecycles, from requirements gathering and planning to UAT coordination, deployment, and post-release documentation.
- Technically hands-on Project Manager with experience in cloud, serverless architecture, automation, security patching, and modern web technologies.
- Strong background in financial systems and compliance projects (IFRS9, Credit Scoring, EKYC)
- Excellent stakeholder and vendor management skills, delivering projects faster through clear documentation, Jira-based tracking, and structured communication.
- Strong collaboration with cross-functional teams (Business, Development, QA, Infrastructure)
- Hands-on understanding of Web Application development (JavaScript, React, TypeScript, SQL)
- Delivers with Agile, Scrum, and Waterfall methodologies
- Hands-on experience in application architecture and cloud platforms (AWS, Azure)

WORK EXPERIENCE

INNOVEST X — Apr 2026 - Present

BUSINESS & SYSTEM ANALYST

Fintech Business & System Analyst adept at translating complex financial workflows into detailed technical requirements, designing scalable integration solutions, and prioritizing developer backlogs to consistently deliver high-quality releases within tight timelines.

- **Requirement Gathering**: Synthesized and mapped complex financial workflows (e.g., payments, KYC, cryptocurrency transactions, regulatory compliance reports) into user stories and BRDs for a 10+ cross-functional team member.
- **Prioritization & Delivery**: Groomed and prioritized the developer backlog in Jira based on business value and technical dependencies, balancing tech debt with release timelines for at least 2 releases every month.
- **Solutioning & Documentation**: Designed system integration flows, including API mapping and sequence diagrams, and maintained detailed Confluence documentation to streamline development and onboarding.

BMW LEASING THAILAND — Feb 2024 - Jan 2026

IT PROJECT MANAGER | BUSINESS ANALYST

Served as IT representative aligning business requirements with the development team on a global solution. Improved workflows, led DevOps automation and security patching, and managed vendors for local applications.

- **AI OCR Project (Website-based)**
  - Delivered an AI-powered OCR solution that reduced document processing time by around 50%.
  - Reviewed the vendor's proposed solution and security assessment to ensure it met business needs.
  - Documented requirements and aligned the business, in-house development team, and vendor to reduce communication overhead.
  - Tracked and summarized UAT issues to confirm the solution worked as expected and was released on schedule.
- **IFRS9 project (Configuration-based)**
  - Reviewed the vendor's IFRS9 solution and flagged the miscalculation, accelerating go-live by one month. The rollout contributed to around a 60% reduction in delinquency.
  - Documented changes in Confluence for future reference and support.
- **Credit Scoring Project (Configuration-based)**
  - Supported the Credit Scoring implementation in line with Bank of Thailand (BOT) standards. Translated complex business requirements into clear technical instructions for developers, enabling them to complete development within a week.
  - Verified changes worked as expected by explaining code logic to the business owner.
- **Finance Calculation Project (Website-based)**
  - Implemented an automated deployment process to cut daily deployment time by 80%.
  - Streamlined operations by documenting processes and training the maintenance vendor to work independently, saving team members at least 30 minutes per week.
  - Negotiated with the vendor to reduce the cost of the project enhancements by over half a million baht in total by using a documented system function.
  - Identified an upcoming Bank of Thailand (BOT) regulation and led sessions with the business unit, documenting requirements and implementation in a BRD.
  - Identified CVEs and vulnerabilities and raised tickets for the development team to remediate.

BMW LEASING THAILAND *(cont.)*

IT PROJECT MANAGER | BUSINESS ANALYST

- **EKYC project (Website-based)**
  - Planned and estimated the timeline for the EKYC project in a new business unit, ensuring timely delivery by guiding the vendor with technical expertise.
  - Optimized cloud services, reducing costs by approximately 30% per month.
  - Converted business requirements into Jira tickets for the development team.
- **Other Tasks**
  - Reviewed Azure cloud configuration and aligned with the infrastructure team to support operations.
  - Coordinated with business users and vendors to obtain deployment approvals.
  - Analyzed system data to produce reports and flag potential issues to management.

DELTA DYNAMIC THAILAND **Mar 2023 - Jan 2024**

PROJECT MANAGER | FULLSTACK DEVELOPER

- **Finance Calculation Project (Website-based)**
  - Coordinated between the client and subvendor to optimize resource management, performing task breakdowns to effectively manage costs, and reducing outsourced man-day expenses by at least 20%
  - Served as the primary liaison between the client and our development team, managing negotiations and breaking down customer requests into smaller tasks to fit into a 2-week sprint instead of a monthly or quarterly release. Used Jira to keep progress transparent and aligned with the customer.
  - Developed a comprehensive reporting system using AWS Athena and Amazon QuickSight to provide stakeholders with real-time insights and analytics.
- **Text-based game project (Website-based)**
  - Worked closely with the product owner to understand the client's needs and goals.
  - Documented operational processes in Confluence and coded a script to automate them.
- **Informative website project (Website-based)**
  - Built an informational website on a low-code platform, integrated with the client's Salesforce CRM.
- **Crypto Wallet Enhancement Project (Application-based)**
  - Gathered requirements from the client and aligned with the vendor to enhance the crypto wallet application.
  - Planned resources and managed the project budget.
  - Reported progress in Sprint Review meetings to keep the project on track.
  - Aligned with the client and development team on deployment windows.

FORVIZ **Dec 2020 - Feb 2023**

PROJECT MANAGER | FULLSTACK DEVELOPER

Worked across the full software lifecycle: gathering customer requirements as a BA, planning projects, selecting technical stacks, and coding.

- **Building Facility Project (Application-based)**
  - Created a website mockup and converted it into a wireframe, streamlining customer approvals for a contract worth over a million Baht while reducing designer workload by approximately 50% compared to regular projects.
  - Facilitated customer meetings by providing clear options, guiding discussions to ensure alignment, and documenting meeting minutes to help conclude meetings within the set timeframe.
- **Finance Calculation Project (Website-based)**
  - Implemented AWS EventBridge and a serverless architecture to automate report generation for customers, eliminating the need for manually assigning tasks to developers daily.
  - Developed a customer website with a React and Material UI frontend, leveraging TypeScript and a serverless backend.
  - Stepped in during a client event after an administrator's accident, taking over critical tasks and centralizing incidents in Jira to prevent disruptions.
- **Analytics Report Project (Application-based)**
  - Met with the client to define needs and goals for the analytics report and documented them in Confluence.
  - Worked backward from the client's needs to the technical implementation, delivering a system that met expectations.
- **Customer CMS Website (Website-based)**
  - Developed a customer CMS website with a React and SCSS frontend.
  - Migrated the website content from a legacy CMS to the newly built website by using a serverless script.

MORELOOP **Aug 2019 - Nov 2020**

JUNIOR PROJECT MANAGER

Environment is what I focus on. Moreloop is an eco-friendly start-up with the main idea of circularising surplus fabric left across garment factories in Thailand. This job opportunity has provided me with business logic and management skills.

- Designed a supply chain-style workflow to automate and streamline the process of pushing over 200 SKUs to the startup's website each month, ensuring efficiency and consistency.
- Developed an inventory system to help the company organize and categorize products efficiently, reducing shipping time by at least one day

EDUCATION

Bachelor Degree in Computer Science,
Thammasat University
2015

CERTIFICATION

Product Management Bootcamp [Skooldio] - 2026

Cloud Native Associate [Jumpbox Academy] - 2023

Professional Scrum Master I - 2022
