

TODSAPORN WATTANAIABPAN

TECHNICAL PROJECT MANAGER | BUSINESS ANALYST

wat.todsaporn@gmail.com Mobile: +(66)63-824-7280

SKILLS

Scrum | Agile | Waterfall | Jira | Notion | Project Planning | Task Estimation | Vendor Management | Github Actions | Terragrunt | Photoshop | ReactJS | Tailwind CSS | Material UI | Serverless | Typescript | MySQL | AWS | MongoDB | Click Up | Miro

SUMMARY

- Experienced 6 years 6 months as Project Manager with strong ability to bridge business requirements and technical teams, ensuring smooth delivery of complex financial, insurance, AI, and regulatory-driven projects.
 - Skilled in managing end-to-end project lifecycles, from requirement gathering and planning to UAT coordination, deployment, and post-release documentation.
 - Technically hands-on Project Manager with experience in cloud, serverless architecture, automation, security patching, and modern web technologies.
 - Strong background in financial systems and compliance projects (IFRS9, Credit Scoring, EKYC)
 - Excellent stakeholder and vendor management skills, delivering projects faster through clear documentation, Jira-based tracking, and structured communication.
 - Strong collaboration with cross-functional teams (Business, Development, QA, Infrastructure)
 - Hands-on understanding of Web Application development (JavaScript, React Native, TypeScript, SQL)
 - Hybrid work with methodologies, Waterfall and Agile
 - Advantageous experience in Application Architecture and Cloud platforms (AWS, Azure), especially in large-scale projects
-

WORK EXPERIENCE

BMW LEASING THAILAND

Feb 2024 - Jan 2026

BUSINESS ANALYST | PROJECT MANAGER | DEVOPS ENGINEER

Be an IT representative to align the business requirement with the development team on a global solution.

Improve the workflow and patching security and lead vendor on a local application.

- **AI OCR Project (Website-based)**
 - Reviewed a purpose solution and security assessment from a vendor to ensure it meets the business's needs.
 - Documented a requirement and aligned with the Business, in-house development team, and vendor. To reduce communication overhead
 - Tracking and summarizing an issue during the UAT period to ensure the solution is working as expected and can be released on the planned.
- **IFRS9 project (Configuration-based)**
 - Contributed to the resolution deployment, reducing delinquency by nearly 60%, using my technical expertise to review the solution, and accelerating implementation by a month.
 - Document a change on a Confluence page for future reference. In case of any future changes or questions.
- **Credit Scoring Project (Configuration-based)**
 - Involved in Credit scoring implementation, which followed Bank of Thailand (BOT) standards. Translated complex business requirements into clear technical instructions for developers, enabling them to complete development within a week.
 - Ensure the change is working as expected by translating the code to communicate with the business owner
- **EKYC project (Website-based)**
 - Planned and estimated a project's timeline for the crucial EKYC project in the new business department, ensuring timely delivery by guiding the vendor with technical expertise.
 - Optimized cloud services, reducing costs by approximately 30% per month.
 - Document and convert a business requirement into a Jira ticket for a development team to follow.
- **Finance Calculation Project (Website-based)**
 - Implemented an automated deployment process to cut daily deployment time by 80%.
 - Streamlined operations by documenting processes and training the maintenance vendor to work independently, saving the team's members at least 30 minutes per week
 - Negotiated with the vendor to reduce the cost of the project enhancements by over half a million baht in total by using a documented system function.
 - Aware of the Regulation of Bank of Thailand (BOT), and then scheduled a meeting with the Business unit to discuss the implementation of the regulation. Using a BRD to document the requirements and the implementation.
 - Queried a CVE and vulnerability,s then created a ticket for the development team to fix the issue.
 - Export data from the system to a CSV file that a business user can use to present
- **Other Tasks**
 - Queried a cloud configuration on Azure and aligned with the Infrastructure team to support the operation.
 - Coordinate with the Business user and vendor to get approval for a project deployment.
 - Inspect an AWS configuration when collaborating with the Vendor's Infrastructure team.
 - Analyze and query data from the system for a report and to identify a potential issue, and report to the Management.

DELTA DYNAMIC THAILAND

Mar 2023 - Jan 2024

PROJECT MANAGER | FULLSTACK DEVELOPER

- **Finance Calculation Project (Website-based)**
 - Coordinated between the client and subvendor to optimize resource management, performing task breakdowns to effectively manage costs, and reducing outsourced man-day expenses by at least 20%
 - Performed task breakdowns to effectively manage costs and reduced outsourced man-day expenses by at least 20%, using Jira to manage the project and the tasks.
 - Served as the primary liaison between the client and our development team, managing negotiations and breaking down customer requests into smaller tasks to fit into a 2-week sprint instead of a monthly or quarterly release. Also utilized transparent project management tools like Jira to maintain clear alignment with the customer.
 - Developed a comprehensive reporting system using AWS Athena and Amazon QuickSight to provide stakeholders with real-time insights and analytics.
- **Text-based game project (Website-based)**
 - Worked closely with the product owner to understand the client's needs and goals.
 - Documented an operation process on Confluence. and coding a script to automate the process.
- **Informative website project (Website-based)**
 - Using Low code platform to build an informative website for the client. and connect with the client's Salesforce CRM.
- **Crypto Wallet Enhancement Project (Application-based)**
 - Gathering a requirement from the client and aligning with the vendor to enhance the crypto wallet application.
 - Planning a resource and managing a budget for a project.
 - Report progress in the Sprint Review Meeting to ensure the project is on track.
 - Align with the client and developer team for a deployment window.

FORVIZ

Dec 2020 - Feb 2023

PROJECT MANAGER | FULLSTACK DEVELOPER

In late 2020, I worked across all aspects of software development, from gathering customer requirements as a BA to project planning, then coding and including selecting the technical stack of the upcoming project

- **Building Facility Project (Application-based)**
 - Created a website mockup and converted it into a wireframe, streamlining customer approvals for a contract worth over a million Baht while reducing designer workload by approximately 50% compared to regular projects.
 - Facilitated customer meetings by providing clear options, guiding discussions to ensure alignment, and documenting meeting minutes to help conclude meetings within the set timeframe.
- **Finance Calculation Project (Website-based)**
 - Implemented AWS EventBridge and a serverless architecture to automate report generation for customers, eliminating the need for manually assigning tasks to developers daily.
 - Developed a customer website with a React and Material UI frontend, leveraging TypeScript and a serverless backend
 - Stepped in during a client event after an administrator's accident, I took over critical tasks to ensure smooth operations, prevent disruptions, and save my coworkers valuable time by using Jira to centralize all accidents.
- **Analytics Report Project (Application-based)**
 - Conducted a meeting with the client to understand their needs and goals for the analytics report. Then document it in Confluence.
 - Working the way back from the client's needs to the technical implementation, I was able to deliver a system that met the client's expectations.
- **Customer CMS Website (Website-based)**
 - Developed a customer CMS website with a React and SCSS frontend.
 - Migrated the website content from a legacy CMS to the newly built website by using a serverless script.

MORELOOP

Aug 2019 - Nov 2020

JUNIOR PROJECT MANAGER

Environment is what I focus on. Moreloop is an eco-friendly start-up with the main idea of circularising the surplus fabric left all over the garment factory in Thailand. This job opportunity has provided me with business logic and management skills.

- Designed a supply chain-style workflow to automate and streamline the process of pushing over 200 SKUs to the startup's website each month, ensuring efficiency and consistency.
- Developed an inventory system to help the company organize and categorize products efficiently, reducing shipping time by at least one day

AUSTRALIA

Aug 2018 - Jul 2019

WORK AND HOLIDAY

Worked in Australia as a casual worker in a cafe and a restaurant.

TEDxBANGKOK

2016 & 2017

VOLUNTEER

Volunteered to help the event from start to feedback session, such as planning a time slot for the speaker, and connecting an attendee with an attendee, staff or speaker.

EDUCATION

Bachelor Degree in Computer Science,
Thammasat University
2015

CERTIFICATION

Cloud Native Associate [Jumpbox Academy]
2023
Professional Scrum Master I
2022
